

Euler's Lost Notes!

During his evening walk, Leonhard Euler misplaced a crucial set of notes containing ideas for a new theorem. Since he took quite a long route, there are many possible spots where he might have dropped them. He wants to locate the notes as quickly as possible, so he follows the shortest TSP route through all the points where he could have lost them. Starting at the green point, Euler only finds his notes at the very last point - the red one. Which letter does Euler encounter at the 24th point after the green starting point?
